Objective

A Software tester having 4+ years of experience in automation testing field with familiarity over selenium, wants to secure a challenging position in a reputable organization to expand my learnings, knowledge and skills.

Experience

- **Tata Consultancy Services**   20/02/2023 - Present
  Automation Test Engineer
  Project: ITQS
  Role: Automation tester
  - Understanding the requirements and functional specifications of the healthcare applications.
  - Worked on functional testing of client applications and then automated test cases as per client's requirements using hybrid automation framework (Selenium with Java).
  - Involved in automation test scripts development/maintainance task asper requirement specifications.
  - Involved in informal and formal testing of test cases during execution cycles and logged multiple defects.
  - Worked on API testing using RestAssured to check if APIs work correctly.
  - Experience in Cucumber BDD framework to write test cases in a simple, easy-to-read format and created feature files and step defination files to run different scenarios.
  - Worked on database testing, API testing using postman, Smoke testing, Sanity testing etc.
  - Experience in working with AWS and also worked on tools like jira, bitbucket, dbever, postman etc.
  - Provided demonstrations to clients on automated applications and worked on the modifications suggested by peers.
  - Developed python-based scripts asper project requirements for data validation etc.

- **Capgemini**   10/11/2020 - 13/02/2023
  Automation Tester
  Project: RFM (Restaurant File Management)
  Role: Automation tester
  - Worked on understanding the requirements and functional specifications of the RFM application.
  - Collected test cases from the functional testers and automated test scripts using selenium and java.
  - Involved in automation test scripts maintainance task asper requirement specifications.
  - Developed multiple macros in automation framework.
  - Experience in TestNG to run tests and get test results.
  - Involved in Test execution during Iteration cycles in agile methodology and logged multiple defects.
  - Worked on CI/CD pipeline to run tests automatically using Jenkins.
  - Worked as a POC for API automation and initiated API automation testing using Postman and opentest framework in team.
  - Worked as an automation reviewer in team and guided team members with their queries.
  - Provided KT sessions to the team for better understanding of tasks.
  - Worked on tasks like bug validation, test case prioritization, test case analysis, defect analysis, production incidents analysis etc.

Education

- **P.R.Patil College of engineering and technology, Amravati**   2016-2020
  B.E (Computer science and engineering)
  8.74 CGPA

Skills

- Automation Testing
- Selenium with Java
- Web UI testing
- Agile methodology
- SDLC,STLC and Defect management life cycle
- Maven

- API testing
- TestNG
- RestAssured
- Cucumber

Tools Used

- Jira
- Bitbucket
- Postman
- Jenkins
- Dbever
- Eclipse
- Visual code

Achievements & Awards

- Automation Engineer practitioner Certified.
- Awarded with "STAR" award for best performance in a quarter in Capgemini.
- Awarded with "Xcelerate warrior Certificate" in TCS.
