Technical Support Engineer at Microsoft

June 2010 - March 2011 (10 months)

Major Roles and Responsibilities:

- Communicate with corporate customers (North America and Europe) via telephone, written correspondence, or electronic service in regard to finding solutions for technically complex problems identified in Microsoft products.
- Handled issues related with Active Directory on Windows Server 2003/2008, DNS, DHCP & network related issues.
- Troubleshoot and repair broken AD replication for common issues (Secure channel, Name resolution dependencies, etc.)
- Troubleshoot USN rollback, FRS and DFSR, Journal Wrap, Morphed Folder, Auth/Non-Auth Restore of Sysvol and System State.
- Provide technical advisory on various Microsoft server products and troubleshoot Windows Certificate Services (PKI), DFS and GPO.
- Functional Skills in basic protocol analysis and PowerShell Administration.

Server Expert Engineer at Zenith Infotech

April 2009 - April 2010 (1 year 1 month)

Zenith Infotech is one of the known Managed Service Provider (MSP) ; I was a Level 3 Server Specialist. I was responsible for Change and Problem Management of Windows and VMware infrastructure. I gained deep understanding of ITIL process and standards. I worked on resolving complex environmental issues and handling escalations.

Major Roles and Responsibilities of Server Expert Engineer:

- Part of highest technical level support team. Responsible for planned changes and problem management.
- Responsible for handling customer infrastructure spread over physical servers, VMware, Windows.
- Involved in assessing and recommending improvements to customer operations for integrated hardware, software, communications and operating systems through regular brainstorming, research and customer interactions.

- As a third-line engineer, I dig into escalations and problem areas to find innovative ways in avoiding future recurrence.
- Providing in-depth analysis and RCA through active problem management.
- Provide specialist skills in supporting and troubleshooting infrastructure problems, priority calls and emergencies.
- Handling technical escalations in form of incidents from Level 2 and Level 1 engineers.
- Management of new and existing projects and meeting deadlines and project coordination.
- Monitoring server performance, activity, capacity and usage to ensure continued integrity and optimal performance and patching.

Server Support Engineer at Convergys

August 2006 - February 2009 (2 years 7 months)

Convergys India Services is a partner of Microsoft which provides professional level support to its customers. My role as a Technical Support Engineer as to provide technical support to Microsoft business customers. I was then handling escalated cases and technically assisting Microsoft customers on Microsoft products.

Major Roles and Responsibilities:

- Represent Microsoft and communicate with corporate customers (North America and Europe) via telephone, written correspondence, or electronic service in regard to finding solutions for technically complex problems identified in Microsoft products.
- Technologies supported include Windows Platform (OS) issues, Terminal Services, Print Server, WMI, Windows Core Services, Performance Issues, and Unexpected Reboot with Memory Dump Analysis \Random Reboot \No Boot issues.
- Solve highly complex level of problems, involving broad, in-depth product knowledge or in-depth product specialty; that may include support of additional product line. Frequently, these problems will not only be technically complex, but will be politically charged situations requiring the highest level of customer skill.
- Responsible for efficiently managing the relationship with the customers and thoroughly documenting their incidents.

- Collaborate on cross-team and cross-product technical issues by working with resources from other groups as needed to resolve customer issues. Collaborate with Tech Leads and escalation resources when appropriate.
